Manage Privileged Access

Stop cyber attacks originating from insider privileges

Privileged user accounts provide advanced access rights to critical systems and sensitive data. They are like VIP passes to a show – only the select few have them.

These accounts appeal to hackers because this access can give complete and unlimited entry to systems and data. They can then stealthily move throughout the network to compromise other systems within the breached environment.

How does PAM improve my security?

PAM or Privileged Access Management reduces the risk of privileged credentials being stolen. It helps organisations provide secure, privileged access to critical assets and enables them to:
1. Discover privileged accounts on systems, devices and applications
2. Automatically manage passwords and other credentials
3. Control access to privileged accounts
4. Isolate, monitor, record and audit privileged access sessions

Many organisations focus time and money managing regular user accounts and underestimate the importance and risk presented by privileged accounts.

Exploits of privileged accounts often begin with phishing schemes. More frequently they are accessed via third parties' or other cloud tenants' digital access. A PWC survey found that 41% of privileged account incidents were via third-party business partners compared to 29% through current employees.

PAM BENEFITS
1. Strengthens security
2. Prevents malware attacks that take advantage of privileged accounts
3. Full audit trail for compliance requirements
4. Easy to manage access for third parties and contractors
5. Great flexibility to provide privileged access securely and quickly

Forrester Research Privileged Identity Management, Q4 2018 report estimates that 80% of data breaches involve theft of privileged credentials, such as passwords, tokens, keys and certificates.

WHY CHOOSE A PAM MANAGED SERVICE?

- Lack of in-house cyber security expertise
- Shortage of security skills
- You need 24 hour support
- Helps you meet regulatory and compliance needs
- Removes the need to train staff
- Frees up your IT team's time
- Reduces technology and staff costs
- Peace of mind knowing that experts are helping protect your organisation

zinopy
A Trilogy Technologies Group Company

CYBERARK®

Zinopy is the leading managed security service provider (MSSP) in Ireland with 120 employees. Zinopy also offers:

- Advanced solutions using leading-edge technologies including AI, machine learning and threat intelligence
- Unique insights into the global landscape and latest threats
- 24 hour service with continuous monitoring of all the latest threats
- Reduced upfront technology investments
- Fixed monthly cost

We partner with CyberArk which is the only security software company focused on eliminating cyber threats using insider privileges. Both Forrester and Gartner named CyberArk a leader in this space and it is used by more than half of Fortune 500 companies.

Trust Zinopy to provide you with the best privileged user account protection available.

WHAT OUR CLIENTS SAY

"A Zinopy financial services customer describes the solution as "Very impressive stuff"
